

## **Second week in progcon: October 15 & 18, 2019**

I really enjoyed playing the “kahoot” because it is fun, it enhances my skill in analyzing questions and finding the correct answer as fast as possible. For this week, we continued our topic about creating flowchart that add any two variable and flowchart that is intended to find the area of a circle. For me, I find it really struggling to cope up with my classmates since I have noticed that they are really good in using a computer. Luckily I was able to create the given task the best as I could. It was a fun to create something that could be useful to others especially myself since under this subject, I expect more in creating something related to programming. It was fun and informative type of discussion especially the part when we get to play the kahoot because I enjoyed playing it at the same time learning new things related to our subject.

I am looking forward for more jolly yet informative discussion with this subject and I would really appreciate it if I could enhance my computer skills since I am not a computer literate. I am also doing my best to learn and experience all the things this institution has to offer.
